Agile Team Charter for SE4450

Team identity

- Team name and logo: *Crepancy*
- Project title: *Computer Vision for Accessibility*
- Project Mission: *Many organizations struggle to ensure their spaces meet accessibility standards due to costly and time-consuming evaluations, creating barriers in providing inclusive environments. Our project aims to develop an AI/ML-driven solution that automates the detection and auditing of accessibility in public and private spaces like bathrooms. Using Computer Vision, the system will be able to identify key features in these areas to evaluate the compliance with established accessibility guidelines and provide actionable feedback when standards are not met. In the future, the system could expand to broader contexts such as public transportation, entrances, and other shared environments to ultimately support a scalable, cost-effective approach striving to improve accessibility.*

Roles and responsibilities

- Instructor (Course Lead): *Abdelkader Ouda, aouda@uwo.ca* — oversight, grading rubric alignment, milestone governance, cross-team arbitration; sponsor role if no external partner.
- Faculty Advisor (Team Coach): *Pooja Viswanathan, pviswana@uwo.ca* — technical mentorship, scope realism, regular check-ins, co-signs key deliverables per program policy.
- Industry Sponsor (if applicable) or Instructor as Sponsor: *TBD* — problem context, success criteria, timely feedback, data/assets, milestone reviews.
- Product Owner (student): *Anna Liu* — orders backlog, writes acceptance criteria, schedules review, integrates feedback.
- Scrum Master/Facilitator (student): *Stepan Hartanovich* — facilitates ceremonies, removes impediments, tracks improvement actions.
- Developers/Engineers (students):
    - *Stepan Hartanovich* – API, System Design, System Integrations
    - *Ryan Huang* – AI Vision integration, Data Training
    - *Anna Liu* – AI integration, Data Training, System Design
    - *Jennifer Shi* – AI integration, Data Training, UI/UX
    - *Tiffany Trinh* – AI integration, Data Training, UI/UX

- Stakeholders/SMEs (if any): *Government, People with disabilities, Businesses & property owners, Accessibility experts & advocacy groups* — feedback cadences, decisions required.
- A draft for a RACI (Responsible, Accountable, Consulted, and Informed) chart, that will be updated per project phases/sprints. Provide a link to the repo.
    - RACI Chart Draft: https://docs.google.com/spreadsheets/d/1BsTX3fDFeswYJ5xXf7okJ-2z4b7dXnybYN55LBbAf70/edit?usp=sharing
    - Sample (chart will be updated/reviewed each sprint):

Team Crepancy

R	Responsible
A	Accountable
C	Consulted
I	Informed

PROJECT DELIVERABLE / ACTIVITY	Ryan Huang	Stepan Hartanovich	Anna Liu	Jennifer Shi	Tiffany Trinh
Phase 1: Project Planning					
Project Charter	A	A	A	A	R
Requirements Gathering		C			
Risk Assessment					
Project Schedule					
Security Planning	R	C			

Working agreements

- Collaboration:
    - Pull Request (PR) reviews should be completed within the same day (≤ 24h)
    - Require two members to review/approve for complex or high impact PRs
    - All development updates must be pushed to respective developer branches before merging to test; then main (after full team approval).
    - New PRs and major updates must be posted in the Discord team channel.
    - Tests and documentation updates are required for major features.
- Focus/time:
    - **Core Hours:** Mon-Fri 10:00AM–5:00PM
    - **Stand-up Meetings (15 mins after class):** Mon 1:30PM, Wed 3:30PM, Fri 10:30AM
    - **Meeting-free Blocks:** Mon-Fri 6:00PM–9:00PM, Sun/Sat mornings

    - **Interrupt Protocols:** Ping on Discord or call (for both critical and non-urgent concerns)

- Improvement cadence:
    - **Sprint Start:** At the start of each sprint, review and/or verify the completion of the previous sprint's actions. Decide if unfinished actions should be kept, modified, or dropped. Review sprint backlog to identify and assign owners and due dates for each task.
    - **Sprint End:** At the end of each sprint, identify 1–2 improvement action items from the retrospective. Assign owners, success criteria, and verify completion in the following sprint.
    - **Weekly Check-in:** During the Friday standup, spend 5 minutes reviewing any ongoing improvement items and note progress.

Decision rules

- Routine (two-way door): Whoever is implementing the task will make the decisions (may discuss with other team members if they want additional input). They must document it in a GitHub pull request, issue tracker, or commit message so the team has visibility. If there are any disagreements on the changes, it is easy to reverse and fix for the next commit.
    - Variable/method naming
    - File/folder organization
    - Choosing between UI colours/layout and any tweaks
    - Writing test cases
    - Using helper functions vs. inline code
- Significant design/scope (one-way door): Require the full team's consent including the Project Owner, Development Team/Tech Lead, Faculty Advisor, and Sponsor input when changes affect requirements/timelines. These decisions must be documented formally in an Architecture Decision Record (ADR) or a GitHub issue summary, explaining the decision and reasoning. This includes (but are not limited to) decisions made regarding the following:
    - Choosing frontend framework
    - Selecting backend architecture
    - Deciding database type
    - Integrating third-party APIs
    - Any major scope changes such as adding or removing core features

- Conflict escalation path – If there's a disagreement:
    1. The team will discuss the conflict in a standup or meeting (peer mediation).
    2. If unresolved, the team will consult a Faculty Advisor for mediation.
    3. If the conflict is still unresolved, the instructor will be contacted to make the final decision (and the Sponsor if scope.timeline is impacted).
- Timebox expiry default: If consensus isn't reached within the agreed timebox (e.g., a decision stalls longer than 30 minutes in a meeting):
    - The team will rollback to the latest working version, **or**
    - Pick the smallest/simplest reversible option and document reasoning.

Communication norms

- System of record for work/decisions: Repo-based workbook/GitHub repository (issues, pull requests, and project board) will be the main place for documenting tasks, decisions, and code changes. Meeting notes, brainstorming, or drafting documents will be on both GitHub and a shared Google Docs for easy access.
- Quick async: Team Discord server for channel will be used for any questions and updates including progress tracking. Any major discussions from Discord are to be summarized in GitHub/Google Docs for record-keeping. It is expected for team members to respond within that same day a message was sent, ideally within the 1-2 hours if possible.
- Formal notices/deliverables: All official submissions will be uploaded to OWL, sent to instructor email, or updated on GitHub (depending on what is requested by the instructor) for Instructor/Advisor review.
- Cadences:
    - Stand-up 15 minutes 3x/week (Mon, Wed, Fri) to share progress, challenges, and goals
    - Weekly refinement 30-45 minutes on Saturdays to review upcoming tasks, clarify requirements, and prepare for sprint planning
    - Sprint ceremonies (biweekly): Sprint planning/review/retrospective
    - Advisor/Sponsor check-in: Weekly to share updates and gather feedback

Definition of Done (DoD)
Code Quality & Testing:

- Code is reviewed and approved by at least one teammate, or two teammates if high impact
- Unit/functional tests written and passing (80–100% checks passed)

- Code compiles/builds successfully with no critical warnings or errors

Integration:

- Code/feature branch is successfully merged to test branch after all checks are passed
- No merge conflicts remain
- Test is successfully merged into main and the build is stable
- The feature is demo-ready in the development environment for Sprint Review and included in the potentially shippable increment

Documentation:

- Documentation is updated: API/README/changelog, user notes if user-facing
- The test is marked complete in the project board

Signatures and acknowledgments

- **Students:**
    - Stepan Hartanovich Signature: Date:
    - Ryan Huang Signature: Date:
    - Anna Liu Signature: Date:
    - Jennifer Shi Signature: Date:
